

LiteShow II

Wireless Presentation Adaptor

Now expand your horizons

InFocus LiteShow II hosts built-in AccessPoint+ technology along with wireless multimedia transmission. This enables LiteShow II to be a network access point for your building while allowing you to stream content to the connected projector, thereby extending your network's range and strength. Also LiteShow II has on-board memory which stores the LiteShow manager software – allowing any site guests or new users to install the driver, easily connect and present wirelessly in minutes.

LiteShow II features two outstanding security features to keep your content secure and your network protected at all times. First, each display device connected to LiteShow II can display a 4-digit access code, ensuring that a wireless presentation is being sent to the correct projector in the proper conference room. Second, LiteShow II features advanced WEP 128-bit and WPA-Personal (PSK) data encryption, which prevents others from capturing your sensitive information or accessing your wireless network.

- 4-digit access code
- Industry-leading Advanced Encryption Standard (AES) 128-bit data encryption
- Network Security for wireless gateway activity

LiteShow II Specifications

Wireless range:	Up to 300 feet
Data rate:	Up to 54 Mbps
Security:	WEP 128 and WPA-Personal (PSK)
Resolution Support:	Up to XGA resolution

* Due to settings in the Microsoft Windows Vista graphics sub-system, extended display mode is not supported through the operating system.

LiteShow II

Sever your ties

Until recently most business technology as we know it was tethered by a mass of wires and cables. InFocus' new LiteShow II wireless adaptor is designed to enable big picture presentations wirelessly. For the first time, the LiteShow II harnesses wireless connectivity to seamlessly transmit high-resolution video and audio simultaneously; this means fluid PowerPoint® animations and flawless multimedia presentations to the largest of audiences.
